DESCRIPTION

4,5-Diaryloxazole derivatives

5 TECHNICAL FIELD

This invention relates to new heterocyclic compounds and pharmaceutically acceptable salts thereof which are useful as a medicament.

10 BACKGROUND ART

30

Some heterocyclic compounds have been known as described, for example, in EP 0434034A1.

DISCLOSURE OF INVENTION

- This invention relates to new heterocyclic compounds. More particularly, this invention relates to new heterocyclic compounds and pharmaceutically acceptable salts thereof which have pharmacological activities such as an inhibitory activity on platelet aggregation,
- vasodilating activity, antihypertensive activity or the like and are prostaglandin I_2 agonists, to processes for their production, to a pharmaceutical composition containing the same and to a use thereof for manufacture of medicaments.
- Accordingly, one object of this invention is to provide new and useful heterocyclic compounds and pharmaceutically acceptable salts thereof.

Another object of this invention is to provide processes for production of the heterocyclic compounds and salts thereof.

A further object of this invention is to provide a pharmaceutical composition containing, as an active ingredient, said heterocyclic compounds or pharmaceutically acceptable salts thereof.

Still further object of this invention is to provide

- 2 -

use of the heterocyclic compounds and pharmaceutically acceptable salts thereof for manufacture of medicaments for the therapeutic and/or prophylactic treatment of arterial obstruction, cerebrovascular disease, hepatic cirrhosis, arteriosclerosis, ischemic heart disease, restenosis after percutaneous transluminal coronary angioplasty, hypertension or the like.

The heterocyclic compounds of this invention can be represented by the following formula (I):

Suitable pharmaceutically acceptable salts of the object compound (I) are conventional non-toxic salts and include a metal salt such as an alkali metal salt (e.g. sodium salt, potassium salt, etc.) and an alkaline earth metal salt (e.g. calcium salt, magnesium salt, etc.), an ammonium salt, an organic base salt (e.g. trimethylamine salt, triethylamine salt, pyridine salt, picoline salt, dicyclohexylamine salt, N,N'-dibenzylethylenediamine salt, etc.), an organic acid salt (e.g. acetate, maleate, tartrate, methanesulfonate, benzenesulfonate, formate, toluenesulfonate, trifluoroacetate, etc.), an inorganic acid salt (e.g. hydrochloride, hydrobromide, sulfate, phosphate, etc.), a salt with an amino acid (e.g. arginine, aspartic acid, glutamic acid, etc.), and the like.

In the above and subsequent descriptions of the present specification, suitable examples and illustrations of the various definitions which the present invention include within the scope thereof are explained in detail as follows.

The term "lower" is intended to mean 1 to 6 carbon atom(s), unless otherwise indicated.

Suitable "aryl" may include phenyl, naphthyl and the like.

Suitable "lower alkylene" may include straight or branched one having 1 to 6 carbon atom(s), such as methylene, ethylene, trimethylene, tetramethylene, pentamethylene, hexamethylene or the like, preferably one having 1 to 3 carbon atom(s).

Suitable "lower alkyl" may include straight or branched one having 1 to 6 carbon atom(s), such as methyl, ethyl, propyl, isopropyl, butyl, isobutyl, sec-butyl, t-butyl, pentyl, t-pentyl, hexyl or the like, preferably one having 1 to 4 carbon atom(s).

35 Suitable "protected carboxy" may include esterified

5

10

carboxy and the like.

Suitable example of the ester moiety of an esterified carboxy may be the ones such as lower alkyl ester (e.g. methyl ester, ethyl ester, propyl ester, isopropyl ester, butyl ester, isobutyl ester, tert-butyl ester, pentyl ester, hexyl ester, etc.) which may have at least one suitable substituent(s), for example, lower alkanoyloxy(lower)alkyl ester [e.g. acetoxymethyl ester, propionyloxymethyl ester, butyryloxymethyl ester, valeryloxymethyl ester, pivaloyloxymethyl ester, hexanoyloxymethyl ester, 1(or 2)-acetoxyethyl ester, 1(or 2 or 3)-acetoxypropyl ester, 1(or 2 or 3 or 4)-acetoxybutyl ester, 1(or 2)-propionyloxyethyl ester, 1(or 2 or 3)-propionyloxypropyl ester, 1(or 2)-butyryloxyethyl ester, 1(or 2)-isobutyryloxyethyl ester, 1(or 2)-pivaloyloxyethyl ester, 1(or 2)-hexanoyloxyethyl ester,

- ester, 1(or 2)-isobutyryloxyethyl ester, 1(or 2)pivaloyloxyethyl ester, 1(or 2)-hexanoyloxyethyl ester,
 isobutyryloxymethyl ester, 2-ethylbutyryloxymethyl ester,
 3,3-dimethylbutyryloxymethyl ester, 1(or 2)pentanoyloxyethyl ester, etc.], lower
- alkylsulfonyl(lower)alkyl ester (e.g. 2-mesylethyl ester, etc.), mono(or di or tri)-halo(lower)alkyl ester (e.g. 2-iodoethyl ester, 2,2,2-trichloroethyl ester, etc.), lower alkoxycarbonyloxy(lower)alkyl ester (e.g. methoxycarbonyloxymethyl ester, ethoxycarbonyloxymethyl
- ester, 2-methoxycarbonyloxyethyl ester, 1ethoxycarbonyloxyethyl ester, 1-isopropoxycarbonyloxyethyl
 ester, etc.), phthalidylidene(lower)alkyl ester, or (5lower alkyl 2-oxo-1,3-dioxol-4-yl)(lower)alkyl ester [e.g.
 (5-methyl-2-oxo-1,3-dioxol-4-yl)methyl ester, (5-ethyl-2-
- oxo-1,3-dioxol-4-yl)methyl ester, (5-propyl-2-oxo-1,3-dioxol-4-yl)ethyl ester, etc.]; lower alkenyl ester (e.g. vinyl ester, allyl ester, etc.); lower alkynyl ester (e.g. ethynyl ester, propynyl ester, etc.);
- ar(lower)alkyl ester which may have at least one suitable

substituent(s) such as mono(or di or tri)phenyl(lower)alkyl ester which may have at least one
suitable substituent(s) (e.g. benzyl ester, 4methoxybenzyl ester, 4-nitrobenzyl ester, phenethyl ester,
trityl ester, benzhydryl ester, bis(methoxyphenyl)methyl
ester, 3,4-dimethoxybenzyl ester, 4-hydroxy-3,5-di-tertbutylbenzyl ester, etc.);
aryl ester which may have at least one suitable
substituent(s) (e.g. phenyl ester, 4-chlorophenyl ester,
tolyl ester, tert-butylphenyl ester, xylyl ester, mesityl
ester, cumenyl ester, etc.);
phthalidyl ester; and the like.

Suitable "substituent" in the term "aryl which may have suitable substituent(s)" may include halogen, amino, hydroxy, lower alkoxy, lower alkyl as exemplified above, and the like.

10

15

20

35

Suitable "cyclo(lower)alkane" may include cyclopropane, cyclobutane, cyclopentane and cyclohexane.

Suitable "cyclo(lower)alkene" may include cyclopropene, cyclobutene, cyclopentene and cyclohexene.

Suitable "substituent" in the term

"cyclo(lower)alkane or cyclo(lower)alkene, each of which

may have suitable substituent(s)" may include epoxy,

hydroxy, lower alkoxy and the like.

Suitable "lower alkoxy" may include methoxy, ethoxy, propoxy, isopropoxy, butoxy, isobutoxy, t-butoxy, pentyloxy, t-pentyloxy, hexyloxy and the like.

Suitable "acid residue" may include halogen (e.g. chlorine, bromine, iodine, etc.), lower alkanoyloxy (e.g. acetyloxy, etc.), sulfonyloxy (e.g. methylsulfonyloxy, phenylsulfonyloxy, tolylsulfonyloxy, etc.), and the like.

Suitable "halogen" may include the ones as exemplified above.

Preferred embodiments of the object compound (I) are

30

- 23 -

The processes for preparing the object and starting compounds of the present invention are explained in detail in the following.

5 Process 1

15

20

25

35

The compound (I) or a salt thereof can be prepared by reacting the compound (II) or a salt thereof with the compound (III) or a salt thereof.

This reaction is usually carried out in a solvent

such as acetonitrile, benzene, N,N-dimethylformamide,
tetrahydrofuran, methylene chloride, ethylene chloride,
chloroform, diethyl ether or any other solvent which does
not adversely affect the reaction.

The reaction temperature is not critical and the reaction is usually carried out under cooling to warming.

The reaction is usually carried out in the presence of a base.

Suitable base may include the inorganic base such as alkali metal hydroxide (e.g. sodium hydroxide, potassium hydroxide, etc.), alkaline earth metal hydroxide (e.g. magnesium hydroxide, calcium hydroxide, etc.), alkali metal carbonate (e.g. sodium carbonate, potassium carbonate, etc.), alkaline earth metal carbonate (e.g. magnesium carbonate, calcium carbonate, etc.) or the like, and the organic base such as tri(lower)alkylamine (e.g., trimethylamine, triethylamine, diisopropylethylamine, etc.), di(lower)alkylaniline (e.g. dimethylaniline, etc.), pyridine or the like.

30 Process 2

The compound (Ib) or a salt thereof can be prepared . by subjecting the compound (Ia) or a salt thereof to elimination reaction of the carboxy protective group.

Suitable method of this reaction may include conventional one such as hydrolysis, reduction and the

- 24 -

like.

5

10

15

20

25

(i) For Hydrolysis:

The hydrolysis is preferably carried out in the presence of a base or an acid including Lewis acid.

Suitable base may include an inorganic base and an organic base such as an alkali metal [e.g. sodium, potassium, etc.], the hydroxide or carbonate or bicarbonate thereof, trialkylamine [e.g. trimethylamine, triethylamine, etc.], picoline, 1,5-diazabicyclo[4.3.0]-non-5-ene, 1,4-diazabicyclo[2.2.2]octane, 1,8-diazabicyclo[5.4.0]undec-7-ene, or the like.

Suitable acid may include an organic acid [e.g. formic acid, acetic acid, propionic acid, trichloroacetic acid, trifluoroacetic acid, etc.] and an inorganic acid [e.g. hydrochloric acid, hydrobromic acid, sulfuric acid, hydrogen chloride, hydrogen bromide, etc.]. The elimination using Lewis acid such as trihaloacetic acid [e.g. trichloroacetic acid, trifluoroacetic acid, etc.] or the like is preferably carried out in the presence of cation trapping agents [e.g. anisole, phenol, etc.].

The reaction is usually carried out in a solvent such as water, an alcohol [e.g. methanol, ethanol, etc.], methylene chloride, tetrahydrofuran, 1,2-dimethoxyethane, a mixture thereof or any other solvent which does not adversely influence the reaction. A liquid base or acid can be also used as the solvent. The reaction temperature is not critical and the reaction is usually carried out under cooling to warming.

30

35

(ii) For reduction :

Reduction is carried out in a conventional manner, including chemical reduction and catalytic reduction.

Suitable reducing agents to be used in chemical reduction are a combination of a metal (e.g. tin, zinc,

iron, etc.) or metallic compound (e.g. chromium chloride, chromium acetate, etc.) and an organic or inorganic acid (e.g. formic acid, acetic acid, propionic acid, trifluoroacetic acid, p-toluenesulfonic acid, hydrochloric acid, hydrobromic acid, etc.).

Suitable catalysts to be used in catalytic reduction are conventional ones such as platinum catalysts (e.g. platinum plate, spongy platinum, platinum black, colloidal platinum, platinum oxide, platinum wire, etc.), palladium catalysts (e.g. spongy palladium, palladium black, 10 palladium oxide, palladium on carbon, colloidal palladium, palladium on barium sulfate, palladium on barium carbonate, etc.), nickel catalysts (e.g. reduced nickel, nickel oxide, Raney nickel, etc.), cobalt catalysts (e.g. reduced cobalt, Raney cobalt, etc.), iron catalysts (e.g. 15 reduced iron, Raney iron, etc.), copper catalysts (e.g. reduced copper, Raney copper, Ullman copper, etc.) and the like. The reduction is usually carried out in a conventional solvent which does not adversely influence the reaction such as water, methanol, ethanol, propanol, 20 ethyl acetate, N,N-dimethylformamide, tetrahydrofuran, or a mixture thereof. Additionally, in case that the abovementioned acids to be used in chemical reduction are in liquid, they can also be used as a solvent.

The reaction temperature of this reduction is not critical and the reaction is usually carried out under cooling to warming.

Process 3

35

5

The compound (Id) or a salt thereof can be prepared by subjecting the compound (Ic) or a salt thereof to oxidation reaction.

Oxidation is carried out in a conventional manner and suitable oxidizing reagent may include per acid (e.g., perbenzoic acid, m-chloroperbenzoic acid, performic acid,

- 26 -

peracetic acid, perphthalic acid, etc.), and the like.

The reaction is usually carried out in a conventional solvent such as water, alcohol, (e.g., methanol, ethanol, isopropyl alcohol, etc.), tetrahydrofuran, dioxane, dichloromethane, ethylene dichloride, chloroform, N,N-dimethylformamide, N,N-dimethylacetamide, or any other organic solvent which does not adversely affect the reaction.

The reaction temperature is not critical and the reaction is usually carried out under cooling to heating.

Process 4

5

15

20

25

30

35

The compound (Ie) or a salt thereof can be prepared by subjecting the compound (Id) or a salt thereof to reduction reaction.

This reduction can be carried out in a similar manner to that of the aforementioned <u>Process 2</u>, and therefore the reagents to be used and the reaction conditions (e.g., solvent, reaction temperature, etc.) can be referred to those of the <u>Process 2</u>.

Process 5

The compound (If) or a salt thereof can be prepared by subjecting the compound (Ic) or a salt thereof to reduction reaction.

This reduction can be carried out in a similar manner to that of the aforementioned <u>Process 2</u>, and therefore the reagents to be used and the reaction conditions (e.g., solvent, reaction temperature, etc.) can be referred to those of the <u>Process 2</u>.

Process 6

The compound (Ig) or a salt thereof can be prepared by subjecting the compound (Ic) or a salt thereof to oxidation reaction.

- 27 -

This oxidation can be carried out in a similar manner to that of the aforementioned <u>Process 3</u>, and therefore the reagents to be used and the reaction conditions (e.g., solvent, reaction temperature, etc.) can be referred to those of the <u>Process 3</u>.

Process 7

5

10

The compound (Ih) or a salt thereof can be prepared by subjecting the compound (Ie) or a salt thereof to alkylation reaction.

This reaction can be carried out in accordance with the method disclosed in the Example 20 described later or a similar manner thereto.

15 Process 8

The compound (Ij) or a salt thereof can be prepared by subjecting the compound (Ii) or a salt thereof to reduction reaction.

This reduction can be carried out in a similar manner to that of the aforementioned <u>Process 2</u>, and therefore the reagents to be used and the reaction conditions (e.g., solvent, reaction temperature, etc.) can be referred to those of the <u>Process 2</u>.

25 Process A - 1

The compound (Va) or a salt thereof can be prepared by subjecting the compound (IV) or a salt thereof to hydrolysis reaction.

This reaction can be carried out in accordance with the method disclosed in the Preparation 2 described later or a similar manner thereto.

Process A - (2)

The compound (VII) or a salt thereof can be prepared by reacting the compound (Va) or a salt thereof with the

- 28 -

compound (VI) or a salt thereof.

This reaction can be carried out in accordance with the method disclosed in the Preparation 3 described later or a similar manner thereto.

5

20

25

35

Process A - (3)

The compound (IX) or a salt thereof can be prepared by reacting the compound (VII) or a salt thereof with the compound (VIII) or a salt thereof.

This reaction can be carried out in accordance with the method disclosed in the Preparation 4 described later or a similar manner thereto.

Process B

The compound (XIIa) or a salt thereof can be prepared by reacting the compound (X) or a salt thereof with the compound (XI) or a salt thereof.

This reaction can be carried out in accordance with the methods disclosed in the Preparations 6 and 7 described later or similar manners thereto.

Process C

The compound (IXa) or a salt thereof can be prepared by subjecting the compound (XII) or a salt thereof to dehydration reaction.

This reaction can be carried out in accordance with the methods disclosed in the Preparations 8 and 9 described later or similar manners thereto.

30 Process D

The compound (II) or a salt thereof can be prepared by subjecting the compound (IXb) or a salt thereof to dealkylation reaction.

The reagent to be used in this reaction may include halotrialkylsilane (e.g., iodotrimethylsilane, etc.),

- 29 -

alkali metal thioalkoxide (e.g., sodium thioethoxide, etc.), alkali metal sulfide (e.g., sodium sulfide, etc.), alkali metal diphenylphosphide (e.g., lithium diphenylphosphide, etc.), aluminum halide (e.g., aluminum chloride, aluminum bromide, etc.), boron trihalide (e.g., boron trichloride, boron tribromide, etc.), pyridine hydrochloride, alkylmagnesium halide (e.g., methylmagnesium iodide, etc.), lithium halide (e.g., lithium chloride, etc.), and the like.

The reaction is usually carried out in a conventional solvent such as water, alcohol, (e.g., methanol, ethanol, isopropyl alcohol, etc.), tetrahydrofuran, dioxane, dichloromethane, ethylene dichloride, chloroform, N,N-dimethylformamide, N,N-dimethylacetamide, or any other organic solvent which does not adversely affect the reaction.

The reaction temperature is not critical and the reaction is usually carried out under cooling to heating.

20 Process E

5

The compound (IVa) or a salt thereof can be prepared by reacting the compound (X) or a salt thereof with the compound (XIII).

This reaction can be carried out in accordance with the method disclosed in the Preparation 1 described later or a similar manner thereto.

Process F

The compound (V) or a salt thereof can be prepared by reacting the compound (XIV) or a salt thereof with the compound (XV) or a salt thereof.

This reaction can be carried out in accordance with the method disclosed in the Preparation 28 described later or a similar manner thereto.

- 30 -

Process G

The compound (Va) or a salt thereof can be prepared by subjecting the compound (Vb) or a salt thereof to elimination reaction of the carboxy protective group.

This reduction can be carried out in a similar manner to that of the aforementioned <u>Process 2</u>, and therefore the reagents to be used and the reaction conditions (e.g., solvent, reaction temperature, etc.) can be referred to those of the <u>Process 2</u>.

10

5

Process H

The compound (Xa) or a salt thereof can be prepared by subjecting the compound (XVI) or a salt thereof to reduction reaction.

This reduction can be carried out in a similar manner to that of the aforementioned <u>Process 2</u>, and therefore the reagents to be used and the reaction conditions (e.g., solvent, reaction temperature, etc.) can be referred to those of the <u>Process 2</u>.

20

30

35

Process I

The compound (XVIa) or a salt thereof can be prepared by reacting the compound (XVII) or a salt thereof with the compound (XVIII) or a salt thereof.

25 This reaction can be carried out in accordance with the method disclosed in the Preparation 43 described later or a similar manner thereto.

The object compound (I) of this invention and pharmaceutically acceptable salt thereof have pharmacological activities such as an inhibitory activity on platelet aggregation, vasodilating activity, antihypertensive activity or the like and are prostaglandin I_2 agonists, and therefore can be used for treating and/or preventing arterial obstruction (e.g., chronic arterial obstruction, etc.), cerebrovascular

- 31 -

disease, gastric ulcer, hepatitis, hepatic insufficiency, hepatic cirrhosis, arteriosclerosis, ischemic heart disease, restenosis after percutaneous transluminal coronary angioplasty, hypertension, inflammation, heart failure, renal disease (e.g., renal failure, nephritis, etc.), diabetic neuropathy, diabetic nephropathy, peripheral circulatory disturbance, and the like, and can be also used for protecting organs after transplantation.

- In order to show the utility of the object compound (I), pharmacological data of the representative compound thereof are shown in the following.
 - i) Inhibition of human platelet aggregation induced by ADP
- [I] Test Compound:

Isomer C obtained in Example 2.

20 [II] Test method:

Human blood was obtained from healthy volunteers and mixed with 1/10 volume of 3.8% sodium citrate, pH 7.4. The citrate blood was centrifuged at 150 X g for 10 minutes and the platelet rich plasma (PRP) was removed. The remaining blood was centrifuged for a further 10 minutes at 1500 X g to prepare the platelet poor plasma (PPP), which was used as a reference for platelet aggregation. Aggregation studies were carried out using HEMATRACER 801 (NBS, Japan), a 8 channel aggregometer. 25 μ l of sample solution and 225 μ l of PRP were mixed and stirred at 1000 rpm for 2 minutes at 37°C. Aggregation was induced by ADP solution at the final concentration of 2.5 μ M.

[II] Test Method:

Male Sprague-Dawley rats, aged 8-9 weeks, were anesthetized with diethyl ether and a polyethylene cannula filled with heparin solution was inserted into the femoral artery of the rats to measure mean blood pressure. Mean blood pressure was measured with a pressure transducer and recorded on a polygraph. Two hours after operation, the test compound suspended in 0.5% methyl cellulose was administered orally in a volume of 5 ml/kg. Oral hypotensive effect of the test compound was expressed as the maximal decrease (R max). Briefly, R max was expressed as maximal % change compared to mean blood pressure prior to the administration of the test compound.

The pharmaceutical composition of the present invention can be used in the form of a pharmaceutical preparation, for example, in solid, semisolid or liquid form (e.g. tablet, pellet, troche, capsule, suppository, cream, ointment, aerosol, powder, solution, emulsion, suspension etc.), which contains the object compound (I) or a pharmaceutically acceptable salt thereof as an active ingredient, suitable for rectal, pulmonary (nasal or buccal inhalation), nasal, ocular, external (topical), oral or parenteral (including subcutaneous, intravenous and intramuscular) administrations or insufflation.

The pharmaceutical composition of this invention can contain various organic or inorganic carrier materials, which are conventionally used for pharmaceutical purpose, such as excipient (e.g. sucrose, starch, mannit, sorbit, lactose, glucose, cellulose, talc, calcium phosphate, calcium carbonate, etc.), binding agent (e.g. cellulose, methyl cellulose, hydroxypropylcellulose, polypropylpyrrolidone, gelatin, gum arabic,

- polyethyleneglycol, sucrose, starch, etc.), disintegrator (e.g. starch, carboxymethyl cellulose, calcium salt of carboxymethyl cellulose, hydroxypropylstarch, sodium glycol-starch, sodium bicarbonate, calcium phosphate, calcium citrate, etc.), lubricant (e.g. magnesium
- stearate, talc, sodium laurylsulfate, etc.), flavoring agent (e.g. citric acid, mentol, glycine, orange powders, etc.), preservative (e.g. sodium benzoate, sodium bisulfite, methylparaben, propylparaben, etc.), stabilizer (e.g. citric acid, sodium citrate, acetic acid, etc.), suspending agent (e.g. methyl cally)
- suspending agent (e.g. methyl cellulose, polyvinylpyrrolidone, aluminum stearate, etc.), dispersing agent, aqueous diluting agent (e.g. water), base wax (e.g. cacao butter, polyethyleneglycol, white petrolatum, etc.).

The effective ingredient may usually be administered with a unit dose of 0.01 mg/kg to 50 mg/kg, 1 to 4 times a

- 34 -

day. However, the above dosage may be increased or decreased according to age, weight, conditions of the patient or the administering method.

5 The following preparations and examples are given only for the purpose of illustrating the present invention in more detail.

A solution of potassium tert-butoxide (4.10 g) in tert-butanol-1,2-dimethoxyethane (1:1, 38 ml) was added dropwise to a stirred solution of 2-[(3-methoxyphenyl)-methyl]cyclohexanone (4.10 g) and (p-tolylsulfonyl)methyl isocyanide (4.10 g) in 1,2-dimethoxyethane under ice cooling over 30 minutes. The resulting mixture was stirred at the same temperature for 1 hour and at room temperature for 2 hours and 30 minutes, and then a mixture of diethyl ether and water was added thereto. The organic layer was separated, washed with water and brine, dried over magnesium sulfate, and evaporated in vacuo. The oily residue was chromatographed over silica gel using n-hexane - ethyl acetate as an eluent to afford 1-cyano-2-[(3-methoxyphenyl)methyl]cyclohexane (3.73 g) as an oil.

A 1.5 M solution of lithium diisopropylamide mono(tetrahydrofuran) in cyclohexane (19.9 ml) was added dropwise to a stirred solution of 4,5-diphenyloxazole (6.0 g) in tetrahydrofuran (36 ml) and diethyl ether (18 ml) 20 under dry ice - carbon tetrachloride cooling and the mixture was stirred at the same temperature for a while and at $0^{\circ}C$ for a while. A solution of 2-[(3methoxyphenyl)methyl]cyclohexanone (5.92 g) in tetrahydrofuran (16 ml) was added to the reaction mixture 25 under dry ice-acetone cooling, and the resulting mixture was stirred at the same temperature for several hours. Then the reaction temperature was allowed to rise gradually to room temperature and the reaction mixture was 30 allowed to stand at room temperature overnight. The mixture was treated with ammonium chloride aqueous solution and partitioned between ethyl acetate and 1N hydrochlcric acid. The ethyl acetate layer was separated and washed successively with 1N hydrochloric acid (twice), sodium bicarbonate aqueous solution, and brine, dried over 35

Sodium carbonate (11.13 g) was added portionwise to a stirred solution of dihydroxy-(3-methoxyphenyl)borane (5.85 g) and 3-iodobenzoic acid (8.68 g) in water (138 ml) at room temperature, and then palladium(II) acetate (78.6 mg) was added portionwise thereto at the same temperature. The resulting mixture was stirred at the same temperature for 4 hours. The reaction mixture was filtered, then the filtrate was washed twice with diethyl ether and adjusted to pH 2.0 with 6N hydrochloric acid. The precipitated powder was collected by filtration and dissolved in ethyl acetate. The solution was dried over magnesium sulfate and evaporated in vacuo. The residue was washed with n-hexane to afford 3'-methoxy-3-biphenylcarboxylic acid (4.34 g) as a powder.

To a solution of [2-(3-methoxyphenyl)cyclopentylidene]acetic acid (4.0 g) in methylene chloride (80 ml) were added benzoin (3.7 g), 1-ethyl-3-(3-5 dimethylaminopropyl)carbodiimide (4.1 ml) and 4dimethylaminopyridine (2.1 g). The resulting mixture was stirred at room temperature for 12 hours and then partitioned between ethyl acetate and 1N-hydrochloric The organic layer was separated, washed successively with lN-hydrochloric acid, saturated sodium 10 bicarbonate aqueous solution, and brine, dried over magnesium sulfate, and evaporated in vacuo. The residue and ammonium acetate (6.6 g) were dissolved in acetic acid (40 ml) and refluxed for 4 hours. The reaction mixture 15 was evaporated in vacuo and the residue was partitioned between ethyl acetate and water. The organic layer was washed with saturated sodium bicarbonate aqueous solution and brine, dried over magnesium sulfate, and evaporated in vacuo. The residue was chromatographed by silica gel to 20 give 2-[(4,5-diphenyloxazol-2-vl)methvl]-1-(3methoxyphenyl) cyclopentene (4.1 g).

INTERNATIONAL SEARCH REPORT

Interr 'onal application No.
PCT/JP 94/02116

Box I	Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)			
This international search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:				
ı. X	Claims Nos.: 13,14 have been searched incompletely because they relate to subject matter not required to be searched by this Authority, namely:			
	REMARK: Although claims 13,14 are directed to a method of treatment of the human body (PCT, Rule 39.1(iv)), the search has been carried out and based on the alleged effects of the compounds.			
2.	Claims Nos.: because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:			
3.	Claims Nos.:			
	because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).			
Box II	Observations where unity of invention is lacking (Continuation of item 2 of first sheet)			
This Ir	nternational Searching Authority found multiple inventions in this international application, as follows:			
1.	As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.			
2.	As all searchable claims could be searches without effort justifying an additional fee, this Authority did not invite payment of any additional fee.			
3. [As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:			
4.	No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:			
Rem	The additional search fees were accompanied by the applicant's protest. No protest accompanied the payment of additional search fees.
